

Utilization Solution™

Evidence-Based Clinical Decision Support

As your reimbursement metrics and commercial demands with health plans change, so do your technology needs.

Tier 1 – Education

Delivers decision support for both high and low-tech modalities. Both hosted and forward-deployed options are available. Tier 1 allows a clinical environment to selectively deliver clinical indications that can be used in order entry. You also have control over how broadly guidelines are deployed.

Tier 2 – Quality Improvement

Allows a customer to encode new guidelines within the system, while providing full configuration control over the clinical interaction with physicians. Tier 2 also allows you to store and manage cumulative radiation dose, and provide duplicate alerts across your enterprise.

Tier 3 – Utilization Management

Provides tools that help you confidently manage your business when you begin to assume some or all of the payment risk from your contracted Health Plans. Managing risk requires a powerful set of tools.

Key Benefits

For Capitated Physician Groups

Decrease unnecessary high-cost imaging in cases of capitated contracts with insurance plans while still providing high quality patient care.

For Imaging Providers

Maximize plan reimbursement and avoid denied claims from insurance plans due to inappropriate imaging.

For Insurance Plans

Manage imaging cost and reduce unnecessary imaging by delivering evidence based guidelines directly to physicians.
