LEADING CLINICAL DECISION SUPPORT VENDOR LEVERAGES CUTTING-EDGE INTEGRATION TECHNOLOGY TO ADVANCE POINT OF CARE ORDERING

Kitchener-Waterloo, Ontario, November 26, 2002 - Medicalis Corporation, a leading provider of evidence-based clinical decision-support solutions, today announces its launch of the Intelligo™ technology platform. Intelligo is the technology platform on which Percipio™ is founded. Percipio is a suite of solutions that provides real-time clinical advice to physicians when they need it the most: when they make a decision about patient care by ordering tests, treatments or therapies.

“Open architecture and seamless integration are keys to successful clinical solutions”, said Ron Kelly, CEO of Medicalis Corporation. “Healthcare provider enterprises seldom have a single information system, but rather a multitude of legacy applications and databases”.

Intelligo’s architecture is distributed and highly scaleable, and delivers continuous service to applications that interface with, or are built on top of the Intelligo architecture. Intelligo provides users with a single point of access to multiple systems with shared context, and allows transactions and seamless workflows across those systems. Intelligo supports Healthcare industry standards such as HL-7, DICOM, C-COW, as well as proprietary interfaces.

“Intelligo supports end-to-end clinical workflows by integrating Percipio with other healthcare systems such as physician’s office applications, clinical data repositories, hospital information systems and departmental information systems”, says Rick Strooboscher, Chief Technology Officer of Medicalis Corporation. “This enables institutions to leverage previous investments, and users to have customized views and optimum access to the tools and the data that they need, at the point of care.”

Intelligo leverages industry-standard enterprise-strength technologies such as TIBCO ActivePortal™ for desktop integration and TIBCO ActiveEnterprise™ for server and database integration. TIBCO is the leading provider of business integration solutions enabling businesses to seamlessly integrate systems and applications, and share business processes in real time.

“In today’s dynamic healthcare IT industry, improving the flow of information between healthcare organizations, healthcare professionals and insurance providers can reap significant cost, time, and operational efficiencies,” said Raj Mashruwala, Chief Operating Officer for TIBCO Software Inc. “This alliance, whereby Medicalis will license and embed TIBCO technologies and whereby the two companies market solutions jointly in healthcare, demonstrates successful synergy with healthcare and healthcare IT companies.”.

About Medicalis

Medicalis Corporation focuses on Evidenced-Based Medicine and the enterprise-integration that inserts real-time decision support into clinical workflows, Providing Knowledge for Life™. The company’s solutions strengthen the tie between the physicians who order diagnostic tests & therapies, and the hospitals & ancillary facilities that deliver them. Closing the clinical workflow loop of the ordering/scheduling/notification/results-distribution/follow-up cycle, Medicalis helps leading healthcare institutions to decrease unnecessary variability of care and reduce medical errors, while monitoring the improvement of resource utilization and the optimization of revenues & costs.
